Company Description

TRG, headquartered in Costa Mesa, California, was formed in 1995. TRG has a team of consultants who work together to solve your organization's technology needs. TRG has over 400 customers throughout the United States. Our loyal customer base ranges from single with a majority of them in the Southern California area.

user installations to the LA Unified School District that over 1000 users.

Philosophy

TRG's philosophy is to give our customers a personal touch; however, still have a company structure and strength behind that personal touch.

Technology Marketplace

You can go to a large consulting company that may not know you or Pick/MultiValue, as well as being more expensive. Or, you can go to a one-man shop that does not have the technology expertise in all the areas you need and might be focusing on someone else tomorrow. A single person cannot possibly know everything in the Information Technology (IT) marketplace of today. Ask yourself these questions:

- Are you looking for new application software to add increased features and functionality?
- Are you looking to lower your overall computer total cost of ownership with Windows Terminal Server?
- Are you looking to move to a new system for performance improvement and stability?
- Do you need new analysis reports to manage your business more efficiently?
- Are you concerned about system security?
- Do you feel that your computer system is unsupported?
- Do you want to create a web site to better inform the world about your company?
- Do you need to drill down on your valuable data to make better-informed decisions and be more cost-effective?
- Do you need an effective method to manage document flow to save time, reduce errors and increase cash flow?

If your answer is yes to any of these questions, TRG can assure you that we are the perfect choice and most cost-effective answer for your organization.
